

SYSTEMS INTEGRATION

HMIS and Padmission Journey

Two systems with two roles, but one outcome: ending homelessness and enhancing housing stability.

HMIS platforms serve as the system of record for Continuums of Care. **Padmission Journey serves as the system of action** for housing program operations and financial assistance administration.

Two systems, two roles

[SYSTEM OF RECORD • SYSTEM OF ACTION]

Each platform is purpose-built for its part of the work — together they cover the full path from assessment to housing.

SYSTEM OF RECORD

HMIS

Tracks client-level data across services, supports coordinated entry and referrals, reports outcomes to HUD and funders, and measures system performance.

FUNCTION

- Standardized HUD data model
- Intake and assessment
- Referrals and coordinated entry
- Bed and resource management
- Case management
- HUD compliance and reporting

SYSTEM OF ACTION

Padmission Journey

Administers housing assistance programs, executes tenancy workflows, manages financial assistance, and ensures program compliance.

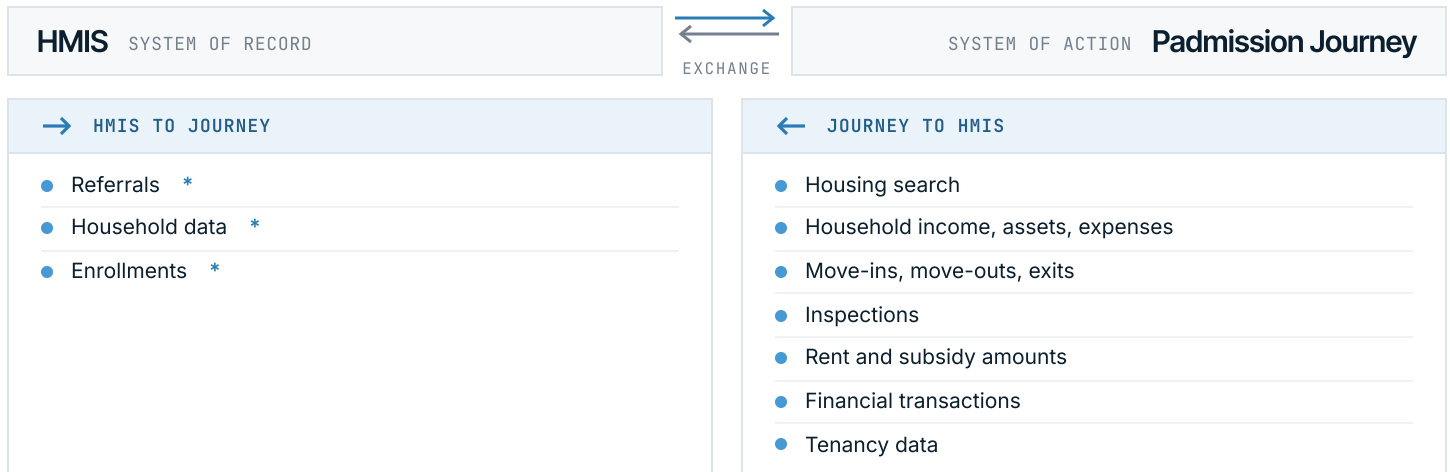

FUNCTION

- Housing program eligibility
- Housing search
- Inspections (HQS / NSPIRE)
- Rent Reasonableness
- Tenant rent and subsidy calculations
- Assisted tenancy management
- Housing and utility assistance payments
- Flex fund administration
- Grant and project utilization management

Integration model

[POTENTIAL DATA EXCHANGE]

A bidirectional exchange keeps both systems current — referrals and enrollments flow in, while housing, financial, and tenancy data flow back out.

* Integration complete with one HMIS product.

ONE OUTCOME

By integrating HMIS and Journey, we create a seamless experience from assessment and referral to housing — combining system-wide visibility with the operational tools needed to deliver results.
